POST:pages/{pageid}/revisions

Overview

public. Performs operations such as hide/unhide for revisions of pages

Uri Parameters

Name	Type	Description
pageid	string	either an integer page ID, "home", or "=" followed by a double uri-encoded page title

Query Parameters

Name	Type	Description
authenticate	bool?	Force authentication for request (default: false)
comment	string?	Reason for hiding revisions
redirects	int?	If zero, do not follow page redirects.

Return Codes

Name	Value	Description
BadRequest	400	Invalid input parameter or request body
Forbidden	403	DELETE access is required to hide a revision and ADMIN access to unhide
NotFound	404	Requested page could not be found
Ok	200	The request completed successfully

Message Format

Input:

```
<revisions>
    <page id="{page id}" revision="{int}" hidden="{true/false}"/>
    ...
</revisions>
```

Output:

```
<pages>
    <page id="{int}" revision="{int}" href="{uri}" hidden="{true}">
        <title>{text}</title>
        <path>{text}</path>
        <date.edited>{date}</date.edited>
        <user.author id="{int}" href="{uri}">
            <nick>{text}</nick>
            <username>{text}</username>
            <email>{text}</email>
        </user.author>
        <description>{text}</description>
        <contents type="{contenttype}" href="{uri}" />
    </page>
    ...
</pages>
```

Implementation Notes

- Page id in the input xml must match the page id within the URI

Revision hiding

- Hiding and unhiding revisions of a page requires DELETE access to the page
- Hiding the current revision of a page is not allowed
- Hiding an older revision prevents non-admins from accessing that revisions contents but the revision still remains
- Only revisions containing content changes may be hidden
- Revisions listed in the response will indicate hidden="true" if the revision is hidden. Otherwise the attribute is omitted.
