Itasca (1.9.0)

Overview

Deki Wiki 1.9.0, the Itasca release, is focused on improving the user experience. Much attention has been paid to the implementation of the new dialogs, which will help editors find relevant information much quicker. Various common UI views, such as the "Settings not found" error page, as well as the "You do not have access to view this page" have been polished.

Status

Released: March 14th, 2008 (1.9.0b), March 5th, 2008 (1.9.0a), March 2nd, 2008 (1.9.0), February 26th, 2008 (RC1)
Updated: March 14th, 2008 (1.9.0b)
Revision: MindTouch SVN r.7449 (RC1) / r.7523 (1.9.0) / r.7586 (1.9.0a)

Get the Release

- **Source:** Source Download (Deki Wiki 1.9.0b)(instructions for source upgrades)
- **VM:** Software Appliance Download (Deki Wiki 1.9.0a)

Updating VM installs

If you made local modifications to PHP, please remember to revert them prior to upgrading! Remember that it's a good idea to backup your Deki Wiki before upgrading!

- **If upgrading from a release before 1.8.3c**, run **/usr/bin/updateWiki.sh -d** and then **/usr/bin/updateWiki.sh**
- If upgrading from 1.8.3c, run **/usr/bin/updateWiki.sh**

If you run into issues after upgrade, please see the related FAQ.

Some issues to be aware of

- This release had many UI changes - please be sure you do a hard refresh in your browser (Ctrl+F5), or clear your browser's cache if you run into any visual problems
- If your site will not load, please note that you no longer need $wgDreamServer in LocalSettings.php if you were working around bugs in earlier versions. Please remove this from LocalSettings if it exists.
- If the dialogs seem to not do anything, please make sure that the /@gui/ is added to the list of folders to be ignored by Deki Wiki in your apache config

Features

- **Revamped dialog UIs -** based on an early spec to improve the linking experience within Deki Wiki
  - Smart Link dialog
  - Image dialog
  - Move page & move file dialog

    - New windowing system, piggybacking off of YUI's dialog library
- **Extensions UI** - use a simple graphical interface to embed Deki Wiki extensions and generate mashups
    - **Transform content:** Easily convert blocks of text to code snippets, utilizing Deki Wiki's syntax highlighter extension
- **Alternate WYSIWYG editors** - use FCKeditor or TinyMCE instead of Xinha and to get Safari and Opera support
- **Internal groups** - Define users to internal groups, making it easier to manage restrictions to larger groups of users
- **Revamped installer**
    - Standardized packages and naming to to allow for easier Linux packaging
    - Improvements to the web installation UI for a better user experience
- **LDAP service** - Added *usernameattribute* and *groupnameattribute*. See LDAP howto
- New extensions
    - **Mantis extension** - embed any filter from Mantis bug tracker in your Deki Wiki (see below!)
    - **Jira extension** - embed a bug list from a search query or filter from Jira bug tracker into a wiki page
    - **Trac extension** - embed a bug list from a search query from Trac bug tracker into a wiki page
    - **Subversion (SVN) extension** - embed the revision log from an SVN repository within Deki Wiki (with bug# and revision# linking)
