

## DELETE:groups/{groupid}

### Overview

**public.** Remove a group

#### Uri Parameters

Name	Type	Description
groupid	string	either an integer group ID or "=" followed by a double uri-encoded group name

#### Query Parameters

Name	Type	Description
authenticate	bool?	Force authentication for request (default: false)

#### Return Codes

Name	Value	Description
BadRequest	400	Invalid input parameter or request body
Forbidden	403	Administrator access is required
NotFound	404	Requested group could not be found
Ok	200	Request completed successfully

### Message Format

*None*

# Implementation Notes

Groups provide the ability to associate a collection of users with a predefined role.

Use [GET:groups](#) to retrieve a list of existing groups.
